

Changes in Version 0.9.3

Note: There have been numerous additions to the Factory Settings (defaults), so the first time you open a model with this release you must use the Refresh Factory Settings tool and save the model.

1. Adjusted all dialog box widths and heights to correct for new Chrome browser in SketchUp 2017.
2. When creating a section using the Draw/CabWriter/Create Section From Section Plane tool you can now choose either the Front or Back color for the section (mask) color. The Front and Back colors can be changed using the In Model Styles dialog box and editing the CabWriter Section style. See image at right.
3. End Opening sheet components were not being drawn for corner cabinets (Lazy Susan Base and Diagonal Corner Base). They now are.
4. Combined CabWriter and CutList Bridge DXF into one CabWriter install file.
5. Added toe kick (ladder base) to Lazy Susan Base and Diagonal Corner Base cabinets.
6. Fixed a problem with Lazy Susan Base cabs where the top rail was too long and misaligned.
7. Fixed the Create Section From Section Plane tool so that you no longer need to update scenes with active section cuts.
